DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 2,3,5,6-10,13,15,16,19,21 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nemec (US 4,419,088) in view of Trovinger (WO 00/18583).

In regard to claims 21 and 23, Nemec discloses the invention substantially as claimed including a fold blade 31, two fold rollers 21 and 22, that rotate about an axis parallel to the longitudinal axis of the fold blade, and drive means for moving the rollers and blades (see Figs. 1, 7a, 8a and C2,L67 - C3,L58). What Nemec does not disclose is a pinch foot that clamps against the fold blade. However, Trovinger discloses that it is well known in the art of folding to provide a pinch roller 231, with a footprint that clamps against a fold blade and remains in a stationary position along the longitudinal axis as the fold rollers and blade make contact as they move relative to each other for the purpose of keeping a sheet of paper correctly aligned thereby preventing movement of the sheet prior to being folded (see Figs. 14-22 and Pg. 22,L26 – Pg. 27,L18). Therefore, it would have been obvious to one having ordinary skill in the art to have modified the invention of Nemec with the pinching means as taught by Trovinger for the purpose of preventing a paper being misaligned prior to folding.

Page 3

Application/Control Number: 09/970,730

Art Unit: 3721

In regard to claims 2,5,6-10,13,15 16 and 19 Nemec discloses the invention substantially as claimed including guides 13 and 14, fold rollers 21 and 22 attached to housings 24 and 25 and rods 33 to move the blade 31, attached to couplings 35, through a plane which passes between the fold rollers. What Nemec does not disclose is the vertically adjustable rollers, However, Trovinger teaches that it is old and well known in the art of folding to provide folding flaps 230, vertically adjustable rollers 238 orthogonal to the paper, with a housing 211, attached to a coupling 216, with lead screw 215 and pinch rollers 231 elastically mounted by spring and rods 235 in between rollers 238, for the purpose of keeping a sheet stationary prior to folding (see Figs. 14-22). Therefore, it would have been obvious to one having ordinary skill in the art to have modified the invention of Nemec with the pinching and adjusting means as taught by Trovinger for the purpose of keeping a sheet stationary prior to folding

In regard to claim 3, Nemec discloses the invention substantially as claimed except for the rounded folding blade. It would have been an obvious matter of design choice to use a rounded folding blade, since applicant has not disclosed that a rounded folding blade solves any stated problem or is valid for any particular purpose and it appears that the invention would perform equally well with either a flat or rounded folding blade

3. Claims 11,12,20 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nemec in view of Trovinger and in further view of Skipor et al (US 3,954,258).

Application/Control Number: 09/970,730

Art Unit: 3721

In regard to claims 11 and 12, Nemec and Trovinger disclose the invention substantially as claimed including folding flaps 230. What Nemec and Trovinger do not disclose are adjustable flaps with fold rollers attached to the flaps. However, Skipor discloses that it is old and well known in the art of folding to provide folding flaps 18 and 20 that are pivotally biased toward each other and have fold rollers 14 attached (see Fig. 1) for the purpose of increasing folding pressure. Therefore, it would have been obvious to one having ordinary skill in the art to have modified the invention of Nemec with the pinching and adjusting means as taught by Skipor for the purpose of increasing folding pressure.

In regard to claims 20 and 22, Skipor teaches that it is old and well known to provide fold rollers that rotate the axis in a different direction.

Allowable Subject Matter

4. Claims 4,17 and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

5. Applicant's arguments filed 3/30/04 have been fully considered but they are not persuasive.

In response to applicant's argument that is not obvious to combine the teaching of Trovinger into the reference of Nemec since they function in an opposite manner, the test for obviousness is not whether the features of a secondary reference may be bodily

Application/Control Number: 09/970,730

Art Unit: 3721

incorporated into the structure of the primary reference; nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981).

As applicant has admitted in page 9 of his response, the features of the invention are broadly encompassed by the independent claims 21 and 23. The examiner agrees with this position and has given the claims their broadest reasonable interpretation. The examiner also contends that neither a different mode of operation nor the incorporation of a specific item into an invention renders a claim non-obvious. The primary reference of Nemec and the teaching of Trovinger may not function in the same manner, but are both using the same elements, mainly a blade and folding rollers to fold a sheet of material. Furthermore, the teaching of Trovinger was chosen to show the applicant that the pinch rollers perform the intended function in the same manner as the applicant's pinch foot.

Therefore, for the reasons indicated above, the rejection is deemed proper.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Application/Control Number: 09/970,730

Art Unit: 3721

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul Durand whose telephone number is 703-305-4962. The examiner can normally be reached on 0730-1800, Monday - Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi I Rada can be reached on 703-308-2187. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
